

Polyclonal Antibody to HPV 16 L1**Description**

Infection with specific types of HPV has been associated with an increased risk of developing cervical neoplasia. HPV types 6 and 11 have been associated with relatively benign diseases such as genital warts. HPV types 16 and 18, two of the major high-risk types of HPV are strongly associated with cervical, vaginal, and vulvar malignancies. L1 is a major capsid protein of type 16 human papilloma virus..

Product Name

Rabbit anti-HPV 16 L1

Size: 100ug

Immunogen

Ni-NTA purified full-length recombinant HPV16 L1 expressed in E. Coli strain BL21 (DE3)

Applications

Western Blot, ELISA, IHC

Determine optimal working dilutions by titration test.

Storage: -20°C

Formulation

Antibodies are purified by protein A affinity chromatography

For Research Use Only
